**SIBER SYSTEMS ANNOUNCES SUPPORT
FOR MICROSOFT VISTA WITH ROBOFORM®, ROBOFORM2GO**
*Most Widely Used One-Click Form Filling and Password Management Products
Tested and Approved for Use on Microsoft's Newest Windows Operating System*

FAIRFAX, VA — (February 12th, 2007) — Siber Systems, Inc., a leading productivity provider, today announced that its highly acclaimed password management and form-filling products, RoboForm® and RoboForm2Go, offer full support for the Microsoft Windows Vista operating system. Users of Versions 6.8 can instantly upgrade to Vista without complication.

RoboForm, downloaded over 16 million times by users, is a PC Magazine Editor's Choice winner that has received numerous accolades by top publications including The Wall Street Journal, The New York Times and CNET. The PC utility conveniently and securely simplifies the process of filling out online forms by storing multiple user identities, including name, address, phone number, and other important information required by the user; it also securely stores confidential data such as passwords, bank accounts, and credit card numbers. Each time the user fills out an online form or requires access to his or her personal passwords or logins, RoboForm automatically furnishes the data—all while protecting it from theft or loss.

RoboForm2Go is the mobile version of RoboForm. The small yet powerful application loads onto any USB smart drive, keeping passwords, identities, account numbers and other confidential information off PCs. By simply loading RoboForm2Go onto any USB drive, then plugging the drive into a PC's USB port, users can automatically log into online accounts, fill in online forms, or access an address book. The person's personal information never appears on the client PC—and once the drive is removed, all traces of RoboForm2Go are removed from the PC.

"As the general public begins its shift to Windows Vista, it's important for people to know that their passwords, account numbers and other critical personal information will be available for use. Siber Systems has thoroughly tested RoboForm and RoboForm2Go and can report full support as of Version 6.8," said Bill Carey, vice president of marketing for Siber Systems. "Windows Vista owners who are using earlier versions of either product can go to the RoboForm Web site to download the latest RoboForm version at no cost."

Version 6.8 of RoboForm also supports the recently-announced SearchCards feature, a RoboForm enhancement that greatly simplifies online searches and other online information queries. For more information about RoboForm, RoboForm Pro and RoboForm2Go, visit www.roboform.com.

About Siber Systems:
Founded in 1995, Siber Systems creates and markets a wide range of software to both professional programmers and the general public. The company's three best-known products are RoboForm, RoboForm2Go, and GoodSync. RoboForm, a unique password and identity organizer for PCs and mobile devices, has over two million active users worldwide and is available in both consumer and enterprise versions. RoboForm2Go is a portable version of RoboForm that runs directly from USB flash drives combining convenient and secure password management with complete portability. GoodSync is a powerful, yet easy-to-use file backup and synchronization software. The firm also licenses various data parsing, compilation, and transformation products to major technology companies. Headquartered in Fairfax, Virginia, Siber Systems is privately held.
