**SIBER SYSTEMS TO SHOWCASE BETTER ALTERNATIVE
TO SINGLE SIGN-ON AT RSA CONFERENCE 2008**

*RoboForm Enterprise Password Management Application is Easier to Implement than SSO,
Eliminates Enterprise Risks Posed by Typical SSO Central Password Database*

FAIRFAX, VA — (April 7th, 2008) — Siber Systems, Inc., a company dedicated to providing world-class computing productivity software for enterprises and individuals, today announced it will exhibit its breakthrough password management solution, RoboForm Enterprise, at RSA Conference USA 2008 in San Francisco, April 7-11. RoboForm Enterprise provides an improved, client-based strategy for Single Sign-On (SSO) that circumvents many of the problems associated with SSO technologies such as challenging implementation regimens and vulnerabilities to attack at a central password database.

RoboForm Enterprise is a cost effective, easy and secure solution that protects multiple user passwords in a highly secure software “vault.” The application securely stores employee usernames, passwords and other confidential information using powerful AES encryption and a user-defined master password. RoboForm Enterprise offers multiple advantages over SSO solutions including:

- **Easy Implementation.** RoboForm eliminates the considerable task of assembling a central SSO password database. The RoboForm installer is compatible with most automated software install programs, making it easy to deploy on hundreds or even thousands of PCs.
- **Flexibility for Administrators.** Administrators can fully customize every feature to meet specific corporate security and password standards. URLs can be white- or black-listed; unlike standard SSO solutions, RoboForm easily supports both internal and external passwords.
- **Security for Everyone.** SSO’s require that passwords be stored in a central database, making the entire enterprise vulnerable to a single point of attack. RoboForm’s distributed solution eliminates this risk while also protecting identities, passwords and corporate data using AES with a user-defined master password as the key.
- **Productivity for End Users.** Users memorize only one master password. RoboForm Enterprise remembers all the rest, and provides true automated logins.
- **Cost Effective for the Bottom Line.** Intuitive interface, online help, and no server component means RoboForm provides an immediate ROI via increased employee productivity and reduced helpdesk calls.

Siber Systems To Showcase Better Alternative To Single Sign-On At RSA Conference 2008—Page 2

“RoboForm has all the benefits of Single Sign-On without all the negatives,” said Bill Carey, Siber Systems VP of Marketing. “Unlike other SSO solutions, RoboForm Enterprise is easy to deploy, easy to implement, and completely customizable—plus we have a trial version so IT professionals can test it first. We’ve eliminated all risk.”

Study Available

Siber Systems recently released a survey report entitled “Password Management Survey: IT Managers Respond to the Impact of Password Policies on Security and Productivity.” The study found that U.S. workers, managers, and IT staffs alike are increasingly confronted with difficulties arising from computer passwords.

Siber Systems’ report, which reflects the input from 617 IT professionals from all levels and disciplines, detailed the distressing state of password protection in the modern enterprise. Over half of all respondents said the average employee in their firms are required to remember three to five passwords, with an additional 26% saying the number ranges from six to ten or more. Nearly half said that employees are required to use passwords more than 25 times per week; 66% stated that employees write down or store passwords in unsafe places, creating a security problem for their companies.

According to the survey findings, one-third of companies surveyed plan on implementing a new or improved password management solution before the end of calendar year 2008. “RoboForm Enterprise is solving one of the most difficult problems companies face today – protecting corporate data through increased password security – at a fraction of the cost and risk of typical SSO solutions,” stated Carey.

See at RSA Conference

Siber Systems will be demonstrating RoboForm Enterprise during RSA Conference USA 2008, April 7-10 from its exhibit, Booth 850 in the Moscone Convention Center. For more, visit the booth or log on to www.roboform.com/enterprise.

About Siber Systems:

Founded in 1995, Siber Systems creates and markets a wide range of software to both professional programmers and the general public. The company’s three best-known products are RoboForm, RoboForm2Go, and GoodSync. RoboForm, a unique password manager and identity organizer for PCs and mobile devices, has over two million active users worldwide and is available in both consumer and enterprise versions. RoboForm2Go is a portable version of RoboForm that runs directly from USB flash drives combining convenient and secure password management with complete portability. GoodSync is a powerful, yet easy-to-use file backup and synchronization software. The firm also licenses various data parsing, compilation, and transformation products to major technology companies. Headquartered in Fairfax, Virginia, Siber Systems is privately held.
