

Siber Systems' New RoboForm Enterprise Makes Implementing Secure Password Policies Quick and Cost-Effective

Companies Enjoy Increased Password Security through an Alternative Single Sign-On (SSO) Solution with Easy Deployment and Immediate ROI

FAIRFAX, VA (May 29th, 2007) – Siber Systems, the company dedicated to creating world-class, innovative software products designed to make using a computer easier, faster, and more secure for individuals and enterprises around the world, today announced the launch of RoboForm Enterprise. The program, which facilitates secure password practices within companies without sacrificing security or convenience, is the corporate counterpart to RoboForm for consumers, Siber's highly-acclaimed and popular program cited by *PC Magazine* as Editor's Choice and named CNET's Software of the Year.

RoboForm Enterprise lets companies implement a low-risk, cost effective, easy and secure password management solution. IT Managers can completely customize RoboForm Enterprise within 15 minutes to meet the company's password policies. Employees enjoy the same advantages RoboForm offers consumers, but within the corporate setting: they can securely store usernames and passwords, log into web applications automatically, and complete long web forms with one click. Users no longer have to remember a long list of passwords for different sites, rely on the web browser to keep the passwords, write their passwords down, or list them in files on their computer—none of which is secure.

For corporate IT managers, the deployment of RoboForm Enterprise means they can implement company password security policies and not only have them adhered to, but also enjoy the added security without increasing the volume of help desk calls made by employees to assist them with managing and remembering their numerous passwords.

“RoboForm Enterprise is a rare program that allows you to implement more secure password management practices without inconveniencing your employees, or increasing your costs,” said Bill Carey, Siber Systems VP of Marketing. Other Single Sign-On (SSO) programs work at the server level, and require painstaking and time consuming integration. RoboForm Enterprise is easily implemented with simple deployment onto every employee's computer, and all features can be completely customized to the company's specific security and password standards. Once the program is installed the employees only need to memorize one master password, and RoboForm Enterprise remembers all the rest, providing true one-click log-ins. “RoboForm Enterprise is very user-friendly, self-explanatory and intuitive. We've created a much easier and cost-effective password management solution than Single Sign-On or Multi-factor Authentication,” said Carey.

The pay-back from Roboform Enterprise is impressive. In many cases, the costs associated with a deployment of RoboForm Enterprise can be simply recovered by hard dollar help desk savings. That means a company with 1,000 employees can enjoy a 100% return on investment in as little as two months, with total cost savings in the first year

close to \$130K. “Many IT departments are under a lot of pressure to provide more and better service with limited budgets,” said Siber Systems' Vice President of Enterprise Sales. “RoboForm Enterprise can help them easily solve the password security problem, but perhaps the most important benefit is that employees will actually use this tool—and will never want to go back to their old ways.”

About Siber Systems:

Founded in 1995, Siber Systems creates and markets a wide range of software to both professional programmers and the general public. The company's three best-known products are RoboForm, RoboForm2Go, and GoodSync. RoboForm, a unique password and identity organizer for PCs and mobile devices, has over two million active users worldwide and is available in both consumer and enterprise versions. RoboForm2Go is a portable version of RoboForm that runs directly from USB flash drives combining convenient and secure password management with complete portability. GoodSync is a powerful, yet easy-to-use file backup and synchronization software. The firm also licenses various data parsing, compilation, and transformation products to major technology companies. Headquartered in Fairfax, Virginia, Siber Systems is privately held.
