**M-SYSTEMS TO BUNDLE SIBER SYSTEMS' PASS2GO™  
PASSWORD MANAGEMENT APPLICATION ON DiskOnKey® USB FLASH DRIVES**  
*Software Bundle Gives DiskOnKey Users Ability to Securely Carry and Use Personal Passwords  
and Digital Identities Anywhere; One-Click Log-Ins Also Supported*

FAIRFAX, VA — (June 8<sup>th</sup>, 2005) — Siber Systems, Inc., a leading productivity software provider, today announced it has entered into an exclusive agreement with M-Systems (NASDAQ: FLSH), the leading developer of USB flash drives, that enables M-Systems to bundle Siber Systems' Pass2Go™ password management application on M-Systems DiskOnKey® USB flash drives. Using Pass2Go, mobile users can easily—and securely—carry and use web site log-in IDs, bank account information, passwords and more on any PC, without ever leaving a trace of the information on the PC when they're done.

Small enough at 3MB to accommodate any capacity USB flash drive, Pass2Go is a unique and valuable application for road warriors, students, or anyone who needs to carry and use confidential personal information from one PC to another. Pass2Go can confidently be used at Internet cafes, libraries, convention halls, airports, universities, or even at work—anywhere people on-the-go have a computer with USB port.

To keep information organized, Pass2Go includes folders that allow passwords and identities (e.g., address/phone and other personal information) to be stored according to the users' preferred filing system. "Pass2Go, like DiskOnKey drives themselves, solves a very real problem for mobile computer users," said Blaine Phelps, worldwide marketing director for M-Systems DiskOnKey. "We're excited to offer Pass2Go on DiskOnKey products because both technologies make mobile computing easy, trouble-free, and totally secure."

"DiskOnKey products are breakthrough platforms that are helping re-define the USB flash drive category. Their versatility, wide range of configurations, and transfer speeds are unmatched," said Andrew Finkle, Vice President of Marketing for Siber Systems. "By bundling Pass2Go on DiskOnKey USB flash drives, the exposure and popularity of Pass2Go will be significantly increased."

According to a recent research study performed for M-Systems by research agency Hall and Partners, USB flash drives are becoming a solution of choice for a number of important user tasks. The study determined, for example, that 80 percent of respondents are using their USB flash drive for storing multimedia files such as music (62%), graphics (52%) and video (46%).

When asked about future use, however, the respondents said they are looking for more than simple storage. One of the primary capabilities users are seeking is an application that offers password management.

## **M-Systems To Bundle Siber Systems' Pass2Go™ Password Entry Application On DiskOnKey® USB Flash Drives—Page 2**

Pass2Go uniquely satisfies that desire today, by allowing users to carry their most valuable personal information with total confidence that the information will remain secure and independent of the PC upon which it's used. All stored information on Pass2Go is protected using 3-DES, a powerful encryption standard. Pass2Go requires a master password to open the sensitive information.

Pass2Go is based on RoboForm, Siber Systems' award-winning password management and form-filling tool that automates the process of logging onto online accounts and filling online registration and checkout forms. RoboForm has been named CNET Download.com's "Best Software of the Year," and was recently awarded PC Magazine's prestigious "Editors Choice" award.

When an online form is encountered, the Pass2Go user simply clicks his or her name on the browser toolbar to fill forms with his or her personal data. If a login site is encountered, the user only has to click the "passcard" containing the saved login data. The entire form is filled with one click. In addition to that, Pass2Go can automatically perform the entire sequence of actions required to login to an online account: navigate to login form, fill form, click Submit button.
